

Comp212 Assignment2 Report:

Third Party Code:

- I have used from the sample solution for assignment1 the book.html and its corresponding java script with all the cookie functions and a few others taken out due to them being unnecessary for what I was wanting to do.

Testing:

- Tried to access all the pages that should be restricted to the user.
- Entered random values into any section that I could to try and find what restriction to give the input field.
- The testing I found most useful was getting someone else who hadn't seen my site before try and navigate and disrupt the basic pages for the user and then get them to do the same after putting them on the admin page. This showed me various flaws in my site that I was able to reprimand with a bit of effort and a lot of frustration.

Known Problems:

- When making a booking it is possible to book the same room as an existing booking if the bookings checkin and checkout are the exact same as you're specified checkin and checkout. I tried everything but I have no clue as to why my logic is not picking up the clash in dates.
